

DPDP Compliance Vendor Landscape (India, August 2026): Where a Lean, AI-Agent Continuous-Monitoring SaaS for Startups Can Wedge In

TL;DR

The DPDP compliance market has exploded into 15+ identifiable vendors in roughly 18 months, but it has cleanly polarized into two camps — well-funded enterprise governance suites (Privy/IDfy, Perfios, OneTrust, Securiti) at roughly ₹15 lakh–₹50 lakh/year, and a crowded low-end of cheap consent-banner/CMP tools (Complynz, CookieYes, KavachOne, Consently, ComplyZero) plus one-time consulting shops (Codesecure, CapEasy, TCSA, MYITMANAGER, Vinsys) at ₹40,000–₹4 lakh one-time.

"Continuous monitoring for compliance drift" is largely a white space for the SME segment specifically.

The concept exists — QverLabs (AI agents), Scrut, Sprinto, Osano Compliance Check — but these either scan internal data infrastructure (not the evolving website/app surface), are enterprise-priced, or are global tools not localized for DPDP/India. No well-funded player owns the "affordable, SME-focused, continuously re-scan my website/app for new trackers and vendors" niche.

The viable wedge: a subscription (not one-time-fee) SaaS priced roughly ₹3,000–₹8,000/month that reframes DPDP compliance as an ongoing, automated posture rather than a one-and-done audit — timed to the 13 Nov 2026 (Consent Manager registration + penalties) and 13 May 2027 (full compliance) enforcement milestones, and sold into the 10–200-employee Bangalore SaaS/fintech/D2C/healthtech cohort that enterprise vendors ignore and consulting shops overcharge.

Key Findings

Regulatory clock (settled facts). The DPDP Rules 2025 were notified 13 November 2025. Enforcement is phased: Phase 1 (13 Nov 2025) stood up the Data Protection Board of India and definitions; Phase 2 (13 Nov 2026) activates Consent Manager registration (Rule 4) and penalty machinery; Phase 3 (13 May 2027) is full compliance — notice, consent, data-principal rights, security safeguards, breach reporting, retention/deletion, children's data, cross-border transfers. Per the Schedule to the DPDP Act 2023, penalties are graduated: ₹250 crore for failure to implement reasonable security safeguards (Section 8(5)); ₹200 crore for failure to notify a breach; ₹200 crore for non-compliance with children's-data provisions (Section 9); and ₹150 crore for failing additional Significant Data Fiduciary obligations. There is no headcount/revenue exemption, so every startup is in scope. **One uncertain item to flag:** MeitY reportedly consulted in January 2026 on compressing the window toward November 2026; this is NOT notified and remains a proposal only.

Market size and heat. EY India estimates the DPDP Act will drive a ₹10,000 crore (~\$1.2 Bn) compliance-services market over three years, with consent management a leading investment area — EY India's Tiffy Isaac told the Economic Times (17 Nov 2025) that "consent management will be a critical area of investment as large enterprises embed robust digital consent systems into their infrastructure over the next 12–18 months." Inc42 pegs India's privacy/data-governance market at \$1–1.5 Bn today (per IDfy founder Ashok Hariharan). Notably, in the same Inc42 feature, NPST CEO Deepak Chand Thakur observes: "Most organisations are approaching DPDP at the interface layer with better consent forms, cleaner notices. That's

necessary, but it isn't sufficient" — a direct articulation of the gap the proposed product would fill. This is a genuine "compliance gold rush."

The market has bifurcated into three tiers (ConsentOS's June 2026 buyer's guide frames it well and is corroborated across sources):

Enterprise governance suites: Privy (IDfy), OneTrust, Perfios, Securiti, Seqrite, miniOrange.

Consent-first / CMP tools: Consentin (Leegality), CookieYes, KavachOne, Complynz, Consently, ComplyZero, Digital Anumati, GoTrust, Blutic (Neokred).

Consulting/service engagements: Codesecure, CapEasy, TCSA, MYITMANAGER, Vinsys, KavachOne (TechnoAudit), Securis360, Guardata, SolvLegal, Cyberaube.

Details

(1) Vendor map

SOFTWARE / SaaS PRODUCTS

Privy by IDfy — The market leader. Full-stack enterprise privacy governance (consent, Data Compass data discovery, DPR workflows, cookie governance, third-party risk, incident management, AI Compliance Co-pilot). IDfy (operating as Baldor Technologies Pvt. Ltd.) was declared winner of "Code for Consent: The DPDP Innovation Challenge," run by MeitY Startup Hub with the National e-Governance Division, on 8 July 2026 (Jio Platforms was runner-up). Parent IDfy raised \$53M (₹476 crore) in a Series F on 13 Feb 2026 led by Neo Asset Management's Neo Secondaries Fund (~₹220 crore primary) at a roughly ₹2,420 crore (~\$272M) post-money valuation; CEO Ashok Hariharan stated the company is "profitable and cashflow positive." 500+ enterprise clients (e.g., Axis Bank). Enterprise pricing, not published. Enterprise-only; SME is not the target. [consentos](#)

Perfios DPDP Suite — Launched 30 March 2026 (Bengaluru). Data discovery/classification, automated RoPA, consent governance, data-principal rights, cookie consent, database activity monitoring, 22 languages. Distributed via the Credit Nirvana NBFC network; serves 1,000+ institutions across 18+ countries. BFSI/enterprise. Enterprise pricing, not published.

OneTrust — Global incumbent with a DPDP module. Reported India pricing ₹40–50 lakh/year, 90–180 day implementation. Prices by domain/traffic — punishing for growing companies. Enterprise/multinational only.

Securiti AI, Seqrite, miniOrange — Enterprise data-governance/security platforms with DPDP modules and 22-language consent. Enterprise-priced.

ConsentOS — India, BFSI-focused consent infrastructure. Differentiator: a "Legal Obligation Override"/Compliance Vault resolving the RBI/PMLA retention vs DPDP erasure conflict. Published tiers from ₹2,999/month (Year-1 ₹54,990 incl. implementation) up to a ₹1,50,000/month regulated-BFSI Vault tier. Targets regulated BFSI/mid-market. Early-access pricing. [ConsentOS](#)

Consentin (Leegality) — Strongest BFSI consent-capture specialist. Confirmed deployments at Axis Bank, IIFL, Union Bank, Shriram Finance, Flipkart. Free tier 3,000 consents/month; ~₹25 lakh/year reported at scale.

Complynz — Noida, founded 2025, 1–10 employees, founder/Chief Privacy Officer Arpit Garg. AI-powered DPDP + ISO 27001 GRC for MSMEs/startups. Consent at ₹1/visitor; full platform from ₹49,999/year; free tier; PII discovery, vulnerability scanning, DSR portal, remediation planner. Explicitly SME/Bharat-facing.

KavachOne (ConsentiQo) — Mid-market consent platform plus "TechnoAudit" services (gap assessment, implementation, audit, certification). \$89–499/month flat; PII discovery, multilingual/child consent, continuous-monitoring claims. Independent validation and named client wins thin as of June 2026.

CookieYes — Kochi (WebToffee). Cookie consent + a DPDP suite (added April 2026). From ~\$25/month, free tier; offers scheduled weekly/monthly re-scans (Pro/Ultimate). SME websites.

Consently — Usage-based CMP (₹0.01/consent), free tier to 5,000 consents/month, 22 Indian languages. SME-focused; publishes candid cost-breakdown content.

ComplyZero — Website DPDP compliance (cookie consent, scanning, privacy notices) starting free, per-website pricing. SME.

Digital Anumati — DPDP-native consent/preference/DSR/RoPA; positioned as a OneTrust migration alternative at India-first pricing (cutover under 2 weeks).

GoTrust, Blutic (Neokred) — Consent plus continuous-compliance-monitoring claims (GoTrust auto-updates policy templates to DPBI guidance). Neokred launched GRC modules with real-time risk monitoring/anomaly detection in May 2026. [Business Standard](#)

↗

QverLabs (AI Quiver Vision LLP) — Noida, founded 2025, founder Abhi Anand (ex-PwC/EY). Coordinated AI agents scan data infrastructure (databases, S3/data lakes, documents, code repos) for India-specific PII, map gaps to DPDP sections, produce live penalty-exposure scoring, and run a continuous-compliance module with regulatory-change tracking and CI/CD integration. Baseline in ~8 weeks. Pricing "Starting from \$10,000" (Starter) / custom (Enterprise). Funding unconfirmed (Tracxn shows no funding; a conflicting aggregator profile appears mismatched). Enterprise-first but claims to serve all sizes. Its "continuous monitoring" is internal data infrastructure, NOT website tracker re-scanning. [qverlabs](#)

↗

[qverlabs](#)

↗

Scrut Automation, Sprinto — India-built GRC/continuous-control-monitoring platforms (DPDP alongside ISO 27001/SOC 2/GDPR); connect to cloud (AWS/GCP/Azure) and flag control drift in real time. SaaS/fintech mid-market.

Protecto, AccuKnox, Hunto AI, Kraver.ai, Pyroniq.ai, Mavs AI, autoResilience, Quantarra — adjacent AI/security/privacy tooling with DPDP angles (AI-data masking at the LLM layer, CNAPP cloud drift detection, attack-surface PII discovery/dark-web monitoring, etc.).

CONSULTING / SERVICE ENGAGEMENTS (one-time / retainer)

Codesecure — Fixed-fee, stage-scaled: pre-seed ₹75K; Series A ₹1.25L-2L (8-10 weeks); growth/SDF-ready ₹2L-2.5L+. Outsourced DPO retainer ₹30K-60K/quarter; one-time custom notice ₹25K-50K. ISO/IEC 27001:2022-certified delivery, named consultants; serves India, UAE, Australia, Singapore.

CapEasy — Explicitly SME/startup DPDP as a "business-compliance engagement, not a security audit," and openly critical of infosec firms selling enterprise programmes to 12-person SaaS companies. Also building a software suite (Pramaan = its DPDP tool). Strong startup positioning relevant to Bangalore.

TCSA (Tranquility Cybersecurity) — End-to-end DPDP consulting ₹1.5-4 lakh (startups from ₹1.5 lakh; enterprise/SDF under ₹5 lakh); 500+ audits; named auditors; serves Mumbai/Delhi/Bangalore/Hyderabad.

[Tcsa](#)

↗

MYITMANAGER — Full DPDP consulting + DPO-as-a-Service (CIPP/E), free 5-business-day gap assessment, Consent Manager integration. Delivered by Saurabh Gupta (CISM, CIPP/E). Clients incl. Nutrabay, Penguin International, Miracle Foundation; VAPT clients incl. Zomato/Tata 1mg. [MYITMANAGER](#)

↗

Vinsys — Enterprise DPDP consulting (READY framework, 90-day plan, continuous monitoring/audit).

Guardata — Startup-focused DPDP; basic (policy + consent banner) to comprehensive (legal review + security audit) ₹50,000–₹2 lakh.

SolvLegal — Legal/advisory DPDP + GDPR/CCPA, multi-jurisdiction, predictable packages.

Securis360, Cyberaube, dpdpconsultants.com, KavachOne (TechnoAudit) — managed compliance + tooling hybrids with continuous-monitoring service claims.

(2) Continuous monitoring — genuine white space?

Verdict: Mostly white space for the SME "re-scan my evolving website/app surface" use case; partially addressed at the enterprise/infra layer.

Three distinct meanings of "continuous monitoring" coexist in this market, and the distinction is the whole opportunity:

Internal data-infrastructure PII scanning + regulatory-change tracking (QverLabs, Securiti, Complynz, Scrut, Sprinto, AccuKnox, Hunto AI). Real and growing — but it's about databases/cloud/code, is largely enterprise-priced, and requires integration work.

Website cookie/tracker re-scanning for drift (detecting new trackers/cookies as the site changes).

CookieYes offers scheduled weekly/monthly re-scans (Pro/Ultimate). Osano "Compliance Check" (global) offers recurring scheduled website scans explicitly framed around "compliance drift" — but it is NOT India/DPDP-marketed and sits above the SME price band. Blutic offers AI cookie scanning plus real-time risk monitoring. [CookieYes](#)

↗
[Osano](#)

↗
Vendor/processor change monitoring (new third parties). Privy, ComplyScore, and QverLabs offer live vendor registries with change flags — enterprise tier.

What does NOT exist as a clear, funded offering: a **lean, affordable, SME-priced, DPDP-specific product that continuously re-scans a startup's website AND app AND vendor stack together, framed as ongoing drift monitoring, and sold on subscription to 10–200-employee companies**. The closest analog (Osano Compliance Check) is global, English/California-framed, and priced above the Indian SME sweet spot. This is the defensible wedge.

(3) Pricing benchmarks

One-time / consulting engagements (by stage):

Pre-seed / minimum viable: ₹40,000–₹75,000 (Codesecond ₹75K; disclosure-focused programmes from ~₹40,000 one-time; Guardata basic).

Seed / Series A: ₹1.25–2 lakh (Codesecond); startup engagements from ₹1.5 lakh (TCSA); comprehensive ₹50,000–₹2 lakh (Guardata).

Growth / SDF-ready: ₹2–4 lakh (Codesecond ₹2–2.5L+; TCSA to ₹4L, under ₹5L for enterprise/SDF).

Independent cost breakdowns: a startup with <10,000 users can be substantively compliant for under ₹50,000/year (Consently, eCorpIT); a 50-person SME first-year ₹5–15 lakh, ongoing ₹3–8 lakh (Kraver.ai); vendors "routinely quote ₹15 lakh to ₹2 crore" — the gap where founders get overcharged. [Kraver + 2](#)

↗
Fractional/virtual DPO: ₹2–8 lakh/year (Inc42); ₹30K–60K/quarter retainer (Codesecond). In-house DPO ₹25–40 lakh/year. [Inc42 Media](#)

↗

Subscription SaaS pricing:

ConsentOS from ₹2,999/month (Year-1 ₹54,990 incl. implementation). [ConsentOS](#)

Complynz from ₹49,999/year + ₹1/visitor consent; free tier.

KavachOne \$89–499/month flat.

CookieYes from ~\$25/month (free tier); Consently ₹0.01/consent; ComplyZero free-to-low per-website.

[Consently](#)

Kraver.ai SME from ₹50,000/year.

Implication for a monthly price point: A startup today faces a ₹50,000–₹2 lakh one-time consulting bill that produces a static artifact that decays the moment the product ships new features. A subscription at ~₹3,000–₹8,000/month (₹36,000–₹96,000/year) is directly competitive with that one-time spend while delivering ongoing value the engagement cannot. The ₹2,999–₹4,999/month band is already anchored by ConsentOS/Complynz, so a new entrant must justify price through the continuous-monitoring differentiation rather than by undercutting into a race to the bottom.

(4) 2026 funding / launches / customer wins

IDfy \$53M Series F (13 Feb 2026, Neo Secondaries Fund, ~₹2,420 crore valuation, company profitable); Privy declared MeitY DPDP challenge winner 8 July 2026; Axis Bank partnership. [consentos](#)

Perfios DPDP Suite launched 30 March 2026.

Redacto (Bengaluru/Hyderabad, founded 2025, founders Shashank Karincheti & Amit Kumar) raised ₹12 crore (~\$1.4M) seed led by PeerCapital and Antler India (reported Oct 2025). AI-first enterprise privacy governance; partners with payment firms/NBFCs; AuthBridge partnership April 2026. Named competitors include SecurWeave, Privado, TrustCheckr, Scrut Automation, Luciditi, and Seclore. Explicitly enterprise-focused; CPO Shashank Karincheti frames the moment as "the beginning of a privacy-first era for Indian enterprises." [Tracxn](#)

Neokred/Blutic GRC modules launched May 2026.

Cross Identity's Vishwaas AI free-licence period ended 30 June 2026 (list price then ~₹50 lakh/year).

Government consent-manager challenge participants: Zoop.one, Concur, NeoKred, Aurelion Future Forge, Reliance Jio Platforms, Perfios, KavachOne. [Inc42 Media](#)

Notable: funding is concentrated at the enterprise end (IDfy/Privy, Redacto). No 2026 funding announcement was found for a startup branding itself as SME-focused continuous compliance monitoring — the SME tools (Complynz, CookieYes, Consently, ComplyDP, ComplyZero) appear bootstrapped.

(5) Adjacent/global players in India

OneTrust — DPDP module; ₹40–50 lakh/year; enterprise/multinational only; not chasing SME.

Osano — Compliance Check (recurring drift scans) is the best global analog to the proposed product but is NOT DPDP/India-marketed and lacks Indian-language support. Its cookie-consent Plus tier is \$199/month (2 users, 3 domains, 30,000 monthly visitors); broader privacy/Compliance Check capability moves to custom enterprise quotes (~\$2,000–\$3,000/month per third-party pricing analyses) — well above the Indian SME band.

Cookiebot (Usercentrics) — mature scanner, weak India/DPDP fit, minimal Indian-language support.

Securiti AI — enterprise AI data governance with an India DPDP solution page; enterprise-priced, no INR/India pricing.

Termly, CookieHub, Didomi, Ketch, TrustArc — global CMPs that list DPDP among supported regimes; SME tiers exist (Termly free scanner + scheduled scans) but none is India-first. [Termly](#)

↗

Net: global players are either enterprise-only (OneTrust/Securiti) or not India-localized (Osano/Cookiebot/Termly). None is aggressively targeting the Indian SME segment with DPDP-specific continuous monitoring.

Recommendations

Positioning — take the "continuous drift monitoring for the evolving startup" wedge. Do not build another consent banner or CMP — that tier is commoditized (₹1/visitor, free tiers everywhere). Build the layer none of the SME tools own: an AI agent that (a) re-scans the customer's website/app on a schedule, (b) diffs against the last scan to flag NEW trackers/cookies/data-collection points/third-party vendors, (c) auto-updates RoPA and privacy notices, and (d) raises a DPDP-mapped alert with remediation steps. Osano proves the concept works globally; no one has localized it affordably for India. NPST's own critique ("most organisations approach DPDP at the interface layer... that isn't sufficient") is your sales narrative.

Pricing — subscription, ₹2,999–₹7,999/month tiers. Anchor against the ₹50,000–₹2 lakh one-time consulting spend with "same annual cost, but it never goes stale." Use a free gap-assessment/scan as top-of-funnel (the universal hook — ConsentOS, MYITMANAGER, Complynz all use it). Avoid per-domain/per-consent pricing (the exact thing SMEs resent about OneTrust); use flat tiers keyed to data-principal volume or scan frequency.

Staged go-to-market:

Now–Nov 2026: Launch the free scanner + drift-diff MVP; ride pre-enforcement urgency. Target Bangalore SaaS/fintech/D2C via founder communities and accelerators. Benchmark to advance: 50–100 free-scan signups/month before charging.

Nov 2026 (penalty + Consent Manager phase begins): Convert to paid; add breach-notification (72-hour) workflow and a DPO-lite layer. This first hard deadline is what creates willingness to pay. Benchmark: 5–10% free-to-paid conversion.

Toward May 2027: Add RoPA automation, DPA/vendor management, and integrate with (do not try to become) a registered Consent Manager under Rule 4. Benchmark: 2–3 reference logos per target vertical.

Thresholds that would change this plan:

If a well-funded player (IDfy/Privy, Redacto, Perfios) ships an explicitly SME-priced continuous-monitoring product below ~₹10,000/month → the wedge narrows; pivot to a single vertical (healthtech or D2C) or a channel play (embed via CA firms / accelerators).

If MeitY compresses the deadline to Nov 2026 (currently only proposed) → pull the paid launch forward.

If a global player (Osano/Termly) localizes for India with Indian-language support and INR pricing → compete on DPDP-specific depth they lack (72-hour breach workflow, Consent Manager integration under Rule 4, Indian-language notices).

Caveats

Much pricing is self-published by vendors or appears in vendor-authored "best of" guides that rank themselves first (ConsentOS, Complynz, KavachOne, ComplyDP, Hunto). Treat comparative rankings skeptically; the price points are more reliable where drawn from a vendor's own pricing page.

QverLabs funding data is contradictory (Tracxn "no funding"/2025/Noida vs an aggregator's "\$8.3M/2023" that likely describes a mismatched profile) — treat as early-stage, unconfirmed.

The MeitY January 2026 consultation on compressing the compliance window to November 2026 is proposed, NOT notified — do not treat as settled.

"Continuous monitoring" is used loosely to mean three different things (internal PII scanning, website re-scanning, vendor-change tracking); many vendors claim it without offering scheduled website drift re-scans specifically.

Some vendors (Concur, Aurelion Future Forge, autoResilience, Pyroniq.ai) surfaced with thin public detail; their exact product scope and pricing could not be fully verified.

The Consent Manager role under Rule 4 requires a ₹2 crore net worth to register — a lean startup cannot BE a Consent Manager but can integrate with one; build to integrate, not to register. [IndiaTechDesk](#)

↗

Reported IDfy total funding figures vary across trackers (Tracxn ~\$62.7M cumulative vs other aggregators citing >\$118M); the \$53M/13 Feb 2026 Series F itself is well-corroborated.
